

## deployment instructions

For our movie bot, it can be regarded a movie recommend and predict service.

Functions of movie bot show below:

1. It can tell users an overview of the movie if users input a movie name, users can decide whether or not to watch it.
2. It can recommend top-score movies for users if they tell bot what kind of movies they like.
3. It can recommend top-10 high score movies if users don't know what kind of movie they prefer.
4. It can predict the score of movie if users input parameters our bot needs(movie budget, movie popularity, movie release date, movie duration, movie type).
5. It can analyse the emotion of users comment in order to judge whether the user thinks of this movie.
